PRODUCING A PAPER USING LATEX

FIRST AUTHOR

University Department, University Name, Address, City, Postcode, Country email@university

SECOND AUTHOR

Group, Laboratory, Address, City, Postcode, Country email@laboratory

This is where the abstract should be placed. The abstract is generated using the \abstracts environment. It should consist of one paragraph giving a concise summary of the material in the article below. Replace the author details above — if multiple authors share an address then enter them on the same line with a common address. Please avoid footnotes in the abstract or the title — acknowledgements for funding bodies etc. are to be placed in a separate section at the end of the text. An abstract is not required for short paper submissions (max. length 2 pages).

1. Guidelines

1.1. General Guidelines

We have provided eight files for use when producing a paper using latex. You can download these files at:

http://kyoto.evolang.org/content/call-papers

- 1. evolang9.tex the source for this document.
- 2. evolang9.pdf PDF generated from evolang9.tex.
- 3. evolang9.png the figure file.
- 4. evolang9.bib the bibliography file.
- 5. *evolang9.cls* the class file that provides the higher level latex commands for the proceedings. **Don't change the contents of this file.**
- 6. apacite.bst the APA bibliography style file.

- 7. apacite.sty the package handling citations.
- 8. apacite.pdf documentation for the APA packages.

You can delete our sample text and replace it with your own contribution to the volume, although we recommend that you keep an initial version of the file for reference. These files should work with standard latex2e.

1.2. Headings and Text

Please preserve the style of the headings, text font and line spacing in order to provide a uniform style for the proceedings volume. Note that page numbers should not be included — the final pagination of the volume will be done by the publisher.

1.3. References and Citations

References and citations should be in the APA style, using the *apacite.sty* and *apacite.bst* files provided. We have included examples of reference style for various publication types in the References section and in *evolang9.bib*.

Citation Example 1: Pinker and Bloom (1990) argue that ...

Citation Example 2: It has been argued (Pinker & Bloom, 1990) that ...

For details on more complex citation commands, please consult apacite.pdf.

1.4. Footnotes

Footnotes are denoted by a character superscript in the text.^a

1.5. Equations

Equations should be centered and numbered consecutively, as in Eq. (1).

$$p = q + r \tag{1}$$

1.6. Tables

Tables should have a uniform style throughout the paper. We would prefer the border lines to be of the style shown in Table 1 — single lines at top and bottom, no vertical lines at left or right. Placement of inner lines is left to your judgement, but it generally looks better if they are kept to a minimum.

Table captions should be placed at the top of the table, and are generated using the \table caption command. The text within the table should be \footnotesize .

^aThis is a footnote.

Table 1. An example table. This caption is generated using the $\table caption environment$, and the table itself is in $\table caption environment$.

	Column 1	Column 2	Column 3
Row 1	entry	entry	entry
Row 2	entry	entry	entry
Row 3	entry	entry	entry

1.7. Figures/Illustrations/Images

Authors are advised to prepare their figures in black and white. It is best to embed the figures in the text where they are first cited, e.g. see Fig. 1. Please ensure that all labels in the figures are legible. Very large figures and tables should be placed on a page by themselves.

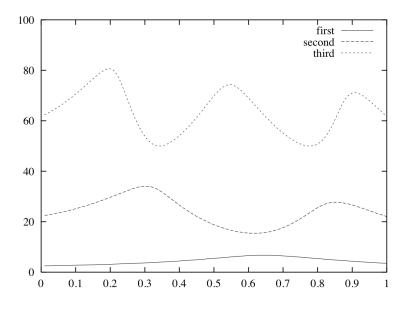

Figure 1. An example graph. All labels are legible, and this caption is in \footnotesize.

The caption heading for a figure should be placed below that figure. The caption text should be \figure .

Acknowledgements

If you wish to acknowledge funding bodies etc., the acknowledgements may be placed in a separate, unnumbered section at the end of the text, before the Appendices.

Appendix A. Appendices

Try to avoid using appendices. If more than one Appendix is necessary then set headings as Appendix A, Appendix B, etc. Appendices should come before the references. Number equations occurring in the Appendix according to appendix number, e.g. (A.1), (A.2), etc.
